Gatsby

The Modern Way To Build The Web

We think websites should be simple, powerful, and easy to build for everyone. Gatsby is an endlessly customizable open source framework for building blazing-fast websites and web apps that are scalable, reliable and secure. Gatsby Cloud is the best way to build and maintain Gatsby sites - and unleash their full performance potential.

*All websites built with Gatsby are fast. But a Gatsby site running on Gatsby Cloud is **insanely** fast.*

Get started at gatsbyjs.com

A Website Built with Gatsby is:

FAST → Think rocket ship vs. cargo ship. No matter where a Gatsby site or web app runs, it's fast by design: pages load in milliseconds rather than seconds. Gatsby lets teams focus on creating lightning-fast, content-driven websites without worrying about becoming performance experts, because performance is simply built in.

A Gatsby Site on Gatsby Cloud is:

INSANELY FAST → Gatsby Cloud's custom-built cloud infrastructure gives your Gatsby site superpowers. Parallelized incremental builds take speed and performance to a whole new level with websites that live on the edge—right where your customers are.

All Gatsby sites are...

SIMPLE → No servers. No databases. Traditional hosting is costly, complex, and puts your site at risk of crashing if traffic spikes unexpectedly. Gatsby's serverless architecture will never go down because it's built on the edge, instantly scaling when your content goes viral.

SECURE → Gatsby websites are inherently more secure. All your content is compiled ahead of time so hackers can't get to your database or into your CMS. And your site is more resilient to DDoS attacks because the biggest point of failure — a server — is no longer part of the equation.

FLEXIBLE → Build websites quickly and deploy them safely, no matter where your content lives. Load data from anywhere: your CMS, a database, static files -- or even multiple places at once.

Your marketing team is happy because they can use the content management tools they're familiar with (WordPress, Drupal, Contentful, Shopify). And they will love Gatsby's out-of-the-box SEO.

Your developers are happy because they can assemble websites and applications from the best-fit components, with Gatsby as the orchestration layer. They get a rich ecosystem of libraries and plugins for seamless integrations, served with the latest web technologies -- React, Webpack, GraphQL, and more.
